

Maryland Smart Energy field app

Training Manual

This manual walks you through the field app screen by screen. Read it before your first job, and keep it handy whenever you are not sure what a button does. Each section shows a real screen from the app and explains what to tap, where things go, and what to do when something does not work the way you expect.

Last updated May 21, 2026

Maryland Smart Energy internal use

1. Sign in

Open the app and tap your 4-digit PIN. The pad submits automatically once you enter the fourth digit. There is no Enter button to press.

Sessions last 30 days. You can sign out anytime by tapping the exit icon in the top-right corner of any screen.

If you tap the wrong PIN, the dots shake. Hit the backspace icon to clear and try again.

2. Jobs home

Your daily home screen. Every job you have worked on in the last 7 days appears here.

Tap a job tile to open it, or tap the red New job button to start a new one.

If a job you expected is not showing up yet, pull down on the list to refresh.

3. New job, blank form

Three things to fill in: business name, utility territory, and crew on site.

Business name is the property or company (for example, "Towson Office Plaza"), not the contact person you are talking to.

Crew on site defaults to just you, the logged-in tech. Tap additional teammates if anyone else is on site with you today.

4. New job, filled in

Here is what the form looks like once everything is picked. The selected utility lights up navy. Selected crew names show a checkmark next to them.

Tap Create job at the bottom. The app drops you into the new job's detail screen, ready for the first unit.

Create job

5. Job detail

Inside a job. Tap Add unit for each HVAC unit you serviced. Units stack up below as you add them.

The Submit job button stays disabled until at least one unit is logged. Once you have added units, it lights up red.

Use the back arrow in the top-left to return to the jobs list. The pencil icon edits the job's name or territory.

6. Add unit, pick a type

First choose what kind of unit you are servicing. Each type has its own photo checklist:

PTAC / Ductless takes 3 photos (pre, post, nameplate). Split System takes 11 photos (outdoor unit from 3 sides plus the air handler).

RTU Small, Medium, and Large each take 7 photos (coil 1 and coil 2 before and after, filter before and after, plus the nameplate).

The screenshot shows the 'Add unit' screen in the MSE Field app. At the top is a dark blue header with the MSE Field logo, the text 'MSE Field', and icons for a grid and a right arrow. Below the header is a back arrow and the title 'Add unit'. The main section is titled 'Unit type *' and contains five selectable options, each in a rounded rectangle. The first row has 'PTAC / Ductless' (incl. water-source HP, VRV/VRF · 3 photos) and 'Split System' (3 outdoor sides + air handler · 11 photos). The second row has 'RTU · Small' (2 coils · 7 photos), 'RTU · Medium' (2 coils · 7 photos), and 'RTU · Large' (2 coils · 7 photos). At the bottom is a light gray button that says 'Save unit · 0/0 required photos'.

- RTU · Medium**
2 coils · 7 photos
- RTU · Large**
2 coils · 7 photos

Save unit · 0/0 required photos

7. Add unit, PTAC checklist

Snap the nameplate FIRST. The AI fills in make, model, and serial from the photo within a few seconds (more on the next page).

Then capture pre-service, post-service, and (optional) filter shots. Each red asterisk is a required photo before you can save.

Add a few extra photos for anything worth flagging like gauges, problem areas, or parts you swapped. Tap Save unit when the checklist is full.

The screenshot shows the 'Add unit' screen in the MSE Field app. At the top, there's a header with the MSE Field logo and a back arrow. Below the header, the title 'Add unit' is displayed. The main content area is divided into several sections:

- Unit type ***: This section contains five buttons: 'PTAC / Ductless' (with subtext 'incl. water-source HP, VRV/VRF - 3 photos'), 'Split System' (with subtext '3 outdoor sides + air handler - 11 photos'), 'RTU - Small' (with subtext '2 coils - 7 photos'), 'RTU - Medium' (with subtext '2 coils - 7 photos'), and 'RTU - Large' (with subtext '2 coils - 7 photos').
- Unit name**: A text input field containing 'PTAC 1'. Below the field, a note states: 'Defaults to PTAC 1 — change to a location like "Rooftop East" or "Suite 201".'
- Nameplate photo(s) ***: A section with a camera icon and the text 'Nameplate *' and 'Make / model / serial label — capture this first'. Below this, a note says: 'Capture this first — make / model / serial below will auto-fill from this photo (coming soon)'.
- Make**: A text input field.
- Serial**: A text input field.
- Before / after photos ***: This section contains three buttons: 'Pre-service *' (with subtext 'Before you start'), 'Post-service *' (with subtext 'After tune-up'), and 'Filter' (with subtext 'New filter installed (optional)').
- Additional photos**: A section with a camera icon and the text 'Add photos'. Below this, a note says: 'Refrigerant gauges, problem areas, anything else that documents the work'.
- Notes**: A text input field with the placeholder text: 'Anything worth flagging — issues found, recommendations, parts needed.'

At the bottom of the screen, there is a button that says 'Save unit • 0/3 required photos'.

8. AI nameplate reading

Snap a photo of the nameplate and Claude AI reads the make, model, and serial straight off the label. Within about 5 seconds, the fields below the photo fill in by themselves. No typing needed.

A small banner above the fields tells you how the read went. You will see one of these three:

Auto-filled from photo. Edit anything below if it is off. (High confidence read.)

Auto-filled, please review for accuracy. Some characters may be hard to read in the photo. (Medium confidence read.)

Could not read the nameplate clearly. Please type the info below. (Photo was blurry or angled.)

If you retake the nameplate later, the AI reads it again. Anything you have already corrected by hand stays as you typed it. The AI never overwrites your edits.

This works offline too. The photo waits in the queue and the AI fills in the fields as soon as you are back on a signal.

9. Submitting a job

When you are done capturing units, tap Submit job on the job detail screen. It brings you here.

Crew on site is pre-filled from what you picked at job creation. Tap Edit if anyone left mid-day or extra hands joined.

Tap the red Submit job button at the bottom. The app finalizes the job and drops you back at the jobs list with a confirmation message.

Photos that have not finished uploading yet keep uploading in the background. Submission is not blocked on a perfect upload queue.

The screenshot shows the 'Submit job' screen in the MSE Field app. At the top, there is a dark blue header with the MSE Field logo, the text 'MSE Field', and two icons: a grid and a share icon. Below the header, the screen has a white background. A back arrow and the title 'Submit job' are at the top left. The main content area is a light gray box containing the job title 'Manual Demo 2026-05-21T19-26-04' and the text '1 unit · 0 services · BGE'. Below this is a yellow warning box with the text: 'Some photos haven't finished uploading yet. You can still submit — they'll keep uploading in the background. Photos Complete will flip to TRUE when they all land.' Underneath the warning box is a white box with the text 'CREW ON SITE' and 'Kevin Cheung', followed by an 'Edit' button with a pencil icon. At the bottom of the screen is a large red button labeled 'Submit job'.

10. Job submitted

What you see right after you submit. The gold banner at the top confirms the dispatch was logged.

The banner fades after a few seconds. The job itself drops off the active list once everything is wrapped, usually the same day.

An automated service report is built in the background and saved to the customer's Drive folder once all photos finish uploading.

11. Photos uploading and stuck retries

Right after you capture a photo, it goes into a local queue that uploads in the background. You will see a small "X pending" pill next to your name in the header. That is the upload counter.

Tap the pill to open the queue inspector. It shows every photo that is still in flight, plus any draft jobs or units waiting to sync because you were offline when you created them.

If a photo has been stuck for more than a minute, the app auto-retries it. After 12 failed tries it shows a red error. Tap the circular arrow next to that photo to force another attempt, or tap "Retry everything" at the top of the inspector to reset every stuck item at once.

Photos stay safe on the phone even after they upload. They are kept locally as a 14-day backup. Tap the floppy-disk icon to pin a specific photo so it never auto-deletes.

Going offline mid-job is fine. The app keeps capturing into the queue and drains it the next time you are back on cell or WiFi. Job submission also works offline. The dispatch will sync once you are connected again.

Tip

Do not stress about the upload counter. Photos are safe on the phone even before they reach the cloud. Losing service does not lose your work. Just keep capturing. The queue drains itself.
